

Maestro BAL™

BAL COMPLIANT SMART ROOF VENTILATOR

Maestro BAL powered by Air IQ is a high-performance, smart ventilator that automatically detects and removes heat & moisture from the roof space. Ideal for homes in bushfire rated areas.

- 
HEAT REDUCTION
 Detects and removes heat from your roof space to help improve thermal performance[^]

- 
CONDENSATION MANAGEMENT
 Reduce the risk of condensation-related damage to your home.

- 
PEACE OF MIND
 Australian made & suitable for all areas, including Bush Fire Areas (up to BAL 40).

Product Specifications

Materials:	Aluminium construction
Throat Diameter:	300mm
Product Weight:	4.1kg
Applications:	Suitable for metal or tile roofs
Flow rate:	Min 220m ³ /hr Max 596m ³ /hr
Power Supply:	Standard power outlet

Detailed warranties, technical data sheets and installation instructions available on website For more information, call 1300 858 674

+One year warranty on power pack.
[^]Operating mode preset to fixed speed for NCC2019 compliance. For more information on how to activate alternate setting see the Product Manual.
 *These colours are made to order with a manufacturing lead time of 10 working days.

Guarantee the performance of your ventilation system by installing metal eave vents

Maestro BAL colour range:

The COLORBOND steel colour swatches shown in this flyer have been reproduced to represent actual product colours as accurately as possible. We recommend checking your selection against an actual sample. COLORBOND®, BlueScope™ and * Colour names are registered trademarks of BlueScope Steel Limited.

Why Ventilate?

Effective ventilation is an important way to create a more comfortable, healthier and energy efficient home. Removing the heat in summer and managing moisture in winter helps to create a better living environment for your family.

Heat Reduction

Removes heat and replaces with outside air

Energy Efficient

Helps reduce the load on air conditioning

Moisture Management

Reduce the risk of moisture - related damage to your home

Improve Air Quality

Replaces stale and polluted air with outside air

Two tips to effectively ventilate your home

1. There must be a path through which the air can be expelled, usually the ventilator.
2. There must be a path for replacement air to enter. Usually via eave, gable, subfloor or other static vents.

In summer, ventilation reduces heat in the roof space. While in winter, controls moisture and encourages fresh air.
